

Position: Junior Scientist Immunology & Cell Biology

We are a transgenic company (www.genoway.com) located in Lyon, France. Created in 1999, the company is developing *in vitro* and *in vivo* research models.

We strengthen our Cell Biology team dedicated to cell-based immunology assays of transgenic models.

You will be part of a research team dedicated to the development and optimization of the *in vitro* platform, with full responsibility on your own projects.

- You will perform experiments, validate experimental protocols, analyze results and design next steps.
- You will interact with other project leaders, technical staff and laboratory managers
- You will present your results and manage your projects in an autonomous way.

Expertise and skills required

- A strong know-how in immunology, oncology and pharmacodynamics
- Extensive hands-on experience in basic methods of cell culture, cell-based assays (Cell culture, Elisa, Immunoassays, immuno-phenotyping...), development of clonal cell lines and primary cell isolation.
- Expertise in flow cytometry is mandatory
- Ability to effectively collaborate across groups
- Independent, flexible and high-energy scientific
- Excellent communication skills.
- PhD is required
- English: fluent
